

ImagePerfect™ SafeTouch

Application guidelines for the installation on touchscreens

ImagePerfect SafeTouch is 100% compatible with touchscreen application

Before the installation of IP SafeTouch, the touchscreen should be verified as functioning correctly.

Before the installation of IP SafeTouch, the touchscreen should be properly cleaned in order to ensure that there is no grease/dirt/dust on the surface that would then become encapsulated underneath the applied film, potentially impacting the touchscreen functionality.

In the event of the installation of IP SafeTouch on **capacitive touch screens** that include a frame (of the type, for instance, found in take-away restaurants for food ordering and airports, shopping centres, entertainment complexes, exhibition centres, etc, for information relay), IP SafeTouch should be applied **within the frame** rather than underneath the frame because, otherwise, covering the sensors with IP SafeTouch underneath the frame could impact the touchscreen functionality.
